

Best Practices to format Excel spreadsheets for Express

Express allows users to create dashboards with just a few clicks by simply uploading Microsoft Excel files.

Express supports data upload for both tabular and crosstabbed formats. The following instructions will help you make sure that the Microsoft Excel file is formatted to fit the requirements for Express prior to being uploaded for analysis.

Tabular Data format, or a flat or denormalized table of data with a single row of headers, can be readily uploaded to Express.

Year	Supplier	City	Profit	Units Sold
2012	Bantam Books	Annapolis	\$38,136	1,090
2012	Audiotronics Inc.	Baltimore	\$28,434	812
2013	Bantam Books	Annapolis	\$11,919	341
2013	Audiotronics Inc.	Baltimore	\$35,542	1,015

Crosstabbed Data format is supported on Express and may be readily uploaded as well. Once uploaded, users may reorganize their data and may do so within the product itself

Supplier	City	Profit		Units Sold	
		2012	2013	2012	2013
Bantam Books	Annapolis	\$38,136	\$11,919	1,090	341
Audiotronics Inc.	Baltimore	\$28,434	\$35,542	812	1,015

Header Titles should not be merged. The example below shows how both merged header names and data values can be unmerged by pasting the values repeatedly across all the cells.

Supplier	City	Profit			
		Q1	Q2	Q3	Q4
Bantam Books	Annapolis	\$38,136	\$11,919	\$47,670	\$19,866
Audiotronics Inc.	Baltimore	\$6,121	\$8,744	\$9,005	\$10,589
Digital Equipment	Baltimore	\$28,434	\$35,542	\$24,119	\$37,027
Lyons Group	Chantilly	\$11,371	\$14,214	\$19,016	\$27,166

Supplier	City	Profit	Profit	Profit	Profit
		Q1	Q2	Q3	Q4

Audiotronics Inc.	Annapolis	\$6,121	\$8,744	\$9,005	\$10,589
Audiotronics Inc.	Baltimore	\$28,434	\$35,542	\$24,119	\$37,027
Digital Equipment	Baltimore	\$11,371	\$14,214	\$19,016	\$27,166

Exclude information that is unrelated to tabular data It is common to have text and other information related to the tabular data within the first few or bottom rows of the Excel worksheet (in the form of headings, footers, summaries, introductions, etc.). The Excel file to be uploaded to Express must only contain the row of headers in its first line and all other data on the worksheet must be deleted and then saved prior to uploading.

Data fields with alphabetic characters or symbols If data fields contain text or symbols, these values will appear blank because they cannot be aggregated. In order to work around this problem, all data should be in numeric format prior to uploading the Excel file. This can be done by using the “Convert to number” feature in Excel for all numeric data fields. Numeric Data that is not available for cells may be left blank. If cells contain alphabetic characters or symbols (e.g. NA, NUL, zero, - , not applicable etc.), replace with a number (i.e. 0) or leave blank as needed. Delete blank rows.

Merge Tables Express only supports the import of one table per worksheet, and only one worksheet at once. If the data in two different tables has no similarities, you will have to put the data on different workbooks/worksheets, to be put on different dashboards.

Excel Number Formats Some Excel number formats are not supported with Express. Examples are [Accounting, Text and Special]. It is recommended that number formatting is applied using Express after the Excel file has been uploaded.

Custom Formatting If you have any cells that have custom formatting, data may be displayed incorrectly on Express.

Macros Excel files that are uploaded on to Express should not contain any macros as they are not supported.

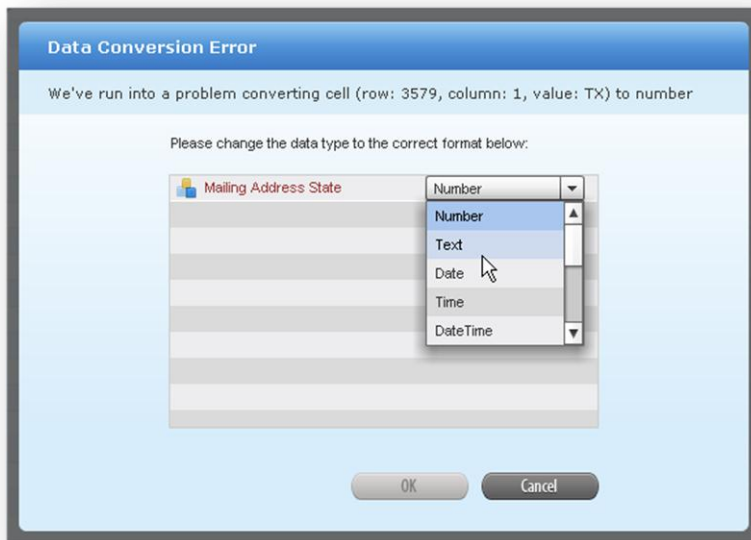

Data Ranges Sorting may not work correctly when rows contain data ranges. For example, in a column that contains numeric ranges such as <100, 100-200, 200-300, 300-400... >1000, the smallest and largest values (>100 and >1000) will appear at the end after using an ascending sort because of the symbols.

	A	B
1	Division	Revenue
2	Large	\$1,000,001 - \$5,000,000
3	Medium	\$50,001 - \$500,000
4	Intermediary	\$500,001 - \$1,000,000
5	Small	< \$50,000
6	Very Large	> \$5,000,001

Data Type Mismatch Express assigns a data type to each data entry in an Excel file. This is done by scanning the first 1,000 rows of each column in the worksheet. For a column containing both numeric values and text values, if the first few rows have both types of values, text data type will be assigned to the column.

However, in cases where first thousand values are numbers and there are text values in rows beyond the 1,000th row, users will observe a Data Conversion error while publishing the cube. This is because Express assigns data type as numeric (based on 1,000 values) and returns an error when it finds text values. Users can change the data type as shown below and proceed with the upload.

	A
3574	102
3575	102
3576	102
3577	102
3578	102
3579	102
3580	TX
3581	TX
3582	TX
3583	TX
3584	TX
3585	TX
3586	TX

The Data Conversion Error would also show up if a column contains more than 1,000 rows of numeric data followed by a footnote in text format. If the footnote is present following a column with less than 1000 rows of numeric data, the error will now show and text data type will be assigned to the entire column.

Different Data Types Please maintain uniformity and consistency of data types for any given column of data

Aggregated Data Rows that contain aggregated data like grand totals, sub totals, or averages, will not be recognized based on row headers. It is best practice to delete rows with aggregated data prior to uploading the Excel file. Aggregations can be calculated once the Excel file has been uploaded to Express. Alternatively, if a sheet that has been uploaded contains such data, the row can be excluded from the visualization as needed.

	A	B	C
1	Country	Year	Number Of Students Enrolled
2	Australia	1998	5565536
3	Canada	1998	7057996
4	France	1998	14495237
5	USA	1998	68915727
6	Total	1998	96034496

Data Transposition In cases where column headers can be converted into attribute values, transposition of data will aid better analysis. To do this, first convert metric names to represent attribute values, and then consolidate all metric columns into a single column of data.

	A	B	C	D
1	Census	Alabama	Alaska	Arizona
2	1990 pop.	4040587	550043	3665228

8	2010	Alabama	4779735
9	2010	Alaska	710231
10	2010	Arizona	6329013

Merged Cells Data that is the same across multiple cells are often merged into a single cell in Microsoft Excel. Express requires that the cells remain unmerged and the data be repeated to be present as needed across the multiple cells.

	A	B	C
